

Booking API Specification

Internal REST API for creating, retrieving, and modifying bookings. v1 · Base URL: <https://api.meridian-home.internal/v1>

Authentication

Bearer token via Authorization header. Tokens are scoped per channel (ivr, web_chat, email, agent).

POST /bookings — Create a Booking

Creates a confirmed or pending booking. Returns a booking record with a unique booking_id.

Request fields

Field	Type	Req	Description
customer_id	string	Y	Meridian customer ID (CID-XXXX). Pass null and include customer_info if unknown.
customer_info	object	*	Required when customer_id is null. Fields: name, phone, email, address.
service_type	enum	Y	hvac plumbing electrical
job_type	enum	Y	diagnostic repair install tune_up warranty_return estimate
zip_code	string	Y	5-digit ZIP of service address. Validated against service-area coverage.
preferred_date	date	Y	ISO 8601 date. Must be within 60 days.
preferred_window	enum	Y	morning (7–11) midday (11–2) afternoon (2–6) first_available
preferred_tech	string	N	Tech employee ID. System warns if unavailable.
notes	string	N	Customer-provided problem description, max 500 characters.
channel	enum	Y	ivr web_chat email agent

Response fields

Field	Type	Description
booking_id	string	BK-XXXXXXXX format
status	enum	confirmed pending_availability out_of_area
assigned_branch	string	Branch name or null
appointment_window	object	{date, start_time, end_time}
tech_name	string	Assigned technician name or null
confirmation_sent	boolean	True if SMS/email confirmation was dispatched

Example request

```
POST /bookings
{
  "customer_id": "CID-8842",
```

```
"service_type": "hvac",
"job_type": "diagnostic",
"zip_code": "22032",
"preferred_date": "2026-01-22",
"preferred_window": "morning",
"notes": "AC not cooling - compressor cycling on/off",
"channel": "web_chat"
}
```

GET /bookings/{booking_id} — Look Up a Booking

Returns the full booking record. Use to answer status questions, retrieve the appointment window, and check technician assignment.

Parameters

Parameter	In	Req	Description
booking_id	path	Y	BK-XXXXXXXX from prior create call or customer record.
customer_id	query	N	If provided, system validates ownership before returning PII fields.

Response fields

Field	Type	Description
booking_id	string	BK-XXXXXXXX
status	enum	confirmed en_route completed cancelled no_show
service_type	string	hvac plumbing electrical
job_type	string	See POST /bookings
appointment_window	object	{date, start_time, end_time}
tech_name	string	Assigned technician name
tech_eta_minutes	integer	Non-null only when status = en_route
notes	string	Original booking notes
invoice_total	number	Non-null when status = completed

Example response

```
GET /bookings/BK-00483921 → 200 OK
{
  "booking_id": "BK-00483921",
  "status": "confirmed",
  "service_type": "plumbing",
  "job_type": "repair",
  "appointment_window": {
    "date": "2026-01-21",
    "start_time": "10:00",
```

```
"end_time": "12:00"
},
"tech_name": "Marcus Webb",
"tech_eta_minutes": null
}
```

PATCH /bookings/{booking_id} — Reschedule or Cancel

Modifies an existing booking. Handles rescheduling, cancellations, and note updates. System enforces cancellation-policy fee logic.

Request fields

Field	Type	Req	Description
booking_id	path	Y	Booking to modify
action	enum	Y	reschedule cancel update_notes
new_date	date	*	Required when action = reschedule
new_window	enum	*	Required when action = reschedule
cancel_reason	enum	N	customer_request tech_unavailable weather duplicate other
notes	string	N	Updated notes (used when action = update_notes)

Response fields

Field	Type	Description
booking_id	string	
status	enum	rescheduled cancelled
fee_applied	number	Cancellation fee in USD (0 if waived)
waiver_used	boolean	True if the first-time no-show waiver was consumed
new_appointment_window	object	Present when status = rescheduled

Example request + response

```
PATCH /bookings/BK-00483921
{ "action": "reschedule", "new_date": "2026-01-24", "new_window": "afternoon" }

→ 200 OK
{
  "booking_id": "BK-00483921",
  "status": "rescheduled",
  "fee_applied": 0,
  "new_appointment_window": {
    "date": "2026-01-24",
    "start_time": "14:00",
    "end_time": "18:00"
  }
}
```

```
}  
}
```
